RURAL HEALTH PROFILE

Hancock County

Fast Facts:

Geography and Demographics

- A rural county – over 90 percent of population lives in a rural area
- Poverty rate is somewhat higher than the state average

Health Status

- Health challenges include: higher than average rates of hospitalization and mortality due to acute myocardial infarctions; higher rate of coronary heart disease mortality; and lower rate of adults who have been immunized for pneumococcal pneumonia
- Based on the County Health Rankings, Hancock County ranks among the top half of counties in the state on most measures (e.g., health outcomes, health behaviors, physical environment).

Health Resources

- Twice as many emergency medical services sites per capita compared to the state average
- Fewer nursing facility beds per capita

Access and Insurance

- Highest percentage of residents without health insurance in the state
- Measures of health care access do not vary greatly from the state average

Health Care Economy

- Health care workers are paid annual wages 30 percent higher than the average for all employment in Hancock County
- Compared to other counties, the share of total employment in the health care sector is smaller

INTRODUCTION

This profile provides a snapshot of the state of health and the health system in Hancock County. The profile is intended to inform and promote local discussions and strategic planning for transforming health and health care in communities. Rapid changes in health care payment and delivery systems are driving health care providers, payers, and other stakeholders to consider how the current delivery system might evolve. This is especially true in rural communities where the historical vulnerabilities of small populations, the lack of scale in the health infrastructure, and remote location are creating pressures on health care providers and communities to reimagine strategies for sustaining—or evolving to—a high performance rural health system.

This profile presents a summary look at the health status of Hancock County’s residents, its health system, health system resources (such as workforce and facilities for health services provision), health care economy, and access to care. By design, this profile focuses on health care delivery sites, with special attention to hospital-based resources, and long-term services and supports. Many indicators are compared to the state as a whole. Maps showing the distribution of health service delivery sites within the county are included as appendices (pages 20-27).

This profile was developed using secondary data—combining federal and state licensure and provider information with resources such as the Maine Shared Health Needs Assessment & Planning Process (SHNAPP) Project reports and the University of Wisconsin Population Health Institute and Robert Wood Johnson Foundation’s County Health Rankings. Data sources are listed and described in Appendix I. Funding for this project was provided by the Maine Health Access Foundation.
HANCOCK COUNTY

GEOGRAPHY AND DEMOGRAPHICS

Hancock County, home to Acadia National Park, is a coastal county located in Downeast Maine. The county has a total land area of 1,587 square miles, a population of 54,557, and a population density of 34.4 residents per square mile. The US Census counts 90.1 percent of residents as living in rural areas, which is 46.9 percent higher than the state average. Hancock is a non-metropolitan county and a portion of the northern part of the county contains unorganized territories, which are sparsely populated. The county also includes several unbridged island communities. The largest urban area in the county is the city of Ellsworth.

Hancock County’s population is 97.0 percent white, 0.3 percent black, and 2.6 percent other. Hancock County has the second lowest percentage of residents under the age of 20 (20.4 percent), ahead of Piscataquis County. It is projected that by 2032, the percent of residents’ aged 65 years and over will be the third highest in the state (27.3 percent), behind Lincoln and Piscataquis counties and the population aged 85 years and over will be 35.4 percent higher than the state as a whole.

Although the median household income in Hancock County ($47,460) is close to the state average ($48,453), the county has a relatively high proportion of residents who are living below the poverty line, including 21.5 percent of residents under the age of 18. With regard to educational attainment, Hancock County has a lower than average percentage of residents aged 25 and over who have not obtained a high school degree (7.3 percent). The percentage of residents who have a Bachelor’s degree or higher (33.2 percent) is the third highest in the state, behind Cumberland and Lincoln counties.

---

1 There are multiple definitions of rural. The U.S. Census Bureau’s urban-rural classification of counties identifies two types of urban areas: Urbanized Areas of 50,000 or more people and Urban Clusters of at least 2,500 and less than 50,000 people. “Rural” areas in this scheme encompass all population, housing, and territory not included within an urban area. Population density is also a common measure used to delineate rural and urban areas, especially when measuring highly rural areas (such as “frontier” areas). Yet another classification scheme is the Office of Management and Budget’s Rural-Urban Continuum Codes (RUCCs). They distinguish metropolitan (metro) counties by the population size of their metro area, and nonmetropolitan (nonmetro) counties by degree of urbanization and adjacency to metro areas. Two of the nine categories for counties are considered completely rural. What defines rural can vary depend on what source is being consulted. The U.S. Census Bureau

2 Persons identifying as AI/AN, Asian, two or more races, and other are shown in the “Other” category in Table 1.

¹ The relative difference column presents the percent change between the percent values for the county and the state. The purpose of this column is to highlight where there are differences between the county and the state and does not signify statistical significance.
HEALTH STATUS

We assessed county-level health status using two recent sources: the 2016 County Health Rankings and the 2015 SHNAPP Project. The SHNAPP Project has compiled population health assessment data to support a collaborative, statewide community health needs assessment process led by the Maine Center for Disease Control and Prevention and the state’s four largest health systems. County Health Rankings, a project of the University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation, uses national data to rank the health of each county relative to others in each state, using a model of population health that emphasizes the many factors that, if improved, can help make communities healthier places to live, learn, work, and play.

Hancock County’s health challenges include a higher than average rate of uninsured residents, cardiovascular health issues, and a lower than average rate of adults who have been immunized for pneumococcal pneumonia (Table 2). Health advantages include a lower than average overall mortality rate and a lower rate of emergency department visits for causes such as pneumonia, diabetes, and unintentional falls.

The County Health Rankings place Hancock County sixth overall among Maine’s 16 counties. The County Health Rankings rank Hancock County as sixth among Maine’s 16 counties for Health Outcomes, noting factors such as residents having fewer poor physical or mental days compared to the state’s average. Hancock County ranks sixth for Health Factors that influence the population’s health. Within Health Factors, the report ranks Hancock County sixth in health behaviors due to lower rates of adult obesity, sexually transmitted infections, and physical inactivity. Hancock County ranks sixth in clinical care owing largely to a high percentage of the population not having health insurance, and a population to provider ratio higher than the state average for dentists and mental health providers. Hancock County ranks ninth in social and economic factors due in part to a higher unemployment rate and a higher rate of injury deaths, and second in physical environment due to residents in the county having the lowest percentage of the workforce that drives alone to work and a lower than average amount of air pollution.

3 All SHNAPP Project indicators referenced in this text and included in Table 2 are statistically significant based on a 95 percent confidence level. This means that the county is significantly better or worse than the state average on all SHNAPP Project indicators included in this report.

HEALTH RESOURCES

Acute and outpatient care

There are three hospitals in Hancock County: Mount Desert Island Hospital in Bar Harbor, Blue Hill Memorial Hospital in Blue Hill, and Maine Coast Memorial Hospital in Ellsworth. Both Mount Desert and Blue Hill Hospitals are Critical Access Hospitals (CAH) (Tables 3 and 4). There are no Veterans Affairs (VA) sites. Ambulatory care sites include one ambulatory surgery center and one end-stage renal disease (ESRD) center; both are located in Ellsworth. See Appendix A (page 20) for a map of ambulatory sites and services in Hancock County and the state.

Emergency medical services in Hancock County include eight ground transportation companies, licensed to bring patients from the site of an emergency to the hospital, and fourteen non-transporting companies, licensed to treat patients at the site of an emergency until a transporting company arrives.

Mount Desert Hospital is independently run, while both Blue Hill Memorial and Maine Coast Memorial Hospitals are part of Eastern Maine Healthcare Systems. The three hospitals in Hancock County provide an array of services as detailed in Table 4. Additional services are available at the hospitals located in neighboring Penobscot County where Eastern Maine Medical Center and Acadia Hospital are located.

---

4 A Critical Access Hospital (CAH) is an acute care hospital certified under a specific set of Medicare Conditions of Participation. CAHs may have no more than 25 inpatient beds and must maintain an annual average length of stay of no more than 96 hours for acute inpatient care; offer full time, round-the-clock emergency care services; and be located in a rural area at least a 35 mile drive (or closer in some circumstances) from any other hospital or CAH. The designation provides a sustainable model of acute care services to meet the needs of vulnerable rural communities.

Hospital-based services actually offered may differ from what is indicated in Table 4. Hospital bed counts were verified with the Medicare Provider of Service File and data from the Maine Department of Licensing and Regulatory Services (DLRS) for hospitals whose AHA bed count included nursing facilities and other discrepancies. See Appendix I for additional information.
HEALTH RESOURCES

Primary care

Hancock County is home to 22 primary care practices (Table 5), of which one is a dedicated pediatric practice located in Ellsworth. Seven of the primary care practices are designated as patient-centered medical homes, while five additional primary care practices have designations as health homes. One primary care practice, located in Ellsworth, is designated as a behavioral health home. There is one community care team, located in Bar Harbor. There is one federally qualified health center site, located in Bucksport. There are no rural health clinics or school-based health centers located in Hancock County. There are three safety net dental clinics, located in Ellsworth and Bucksport. There are more primary care practices, patient-centered medical homes, health homes, community care teams, and safety net dental clinics in Hancock County per capita than in the state as a whole. Maps showing the locations of specific types of primary care practices are provided as Appendices B and C (pages 21 and 22, respectively).

HEALTH RESOURCES

Behavioral health: Mental health and substance use disorder services

As presented in Table 6, there are two mental health treatment facilities and 13 substance abuse treatment facilities in Hancock County (one facility offers both), along with one behavioral health home. See Appendix D (page 23) for a map showing locations of mental health treatment facilities, substance abuse facilities, methadone clinics, and buprenorphine providers in Hancock County and the state.

See Appendix I for a breakdown of data sources. The SAHMSA definition of treatment facilities can be found at: https://findtreatment.samhsa.gov/locator/about. It does not include mental health professionals in private practice (individual) or in a small group practice unless they are licensed or certified as a mental health clinic or (community) mental health center.

\(^1\)Buprenorphine providers includes all physicians authorized to treat opioid dependency with buprenorphine. The actual number of physicians providing medication-assisted treatment is unknown.
HEALTH RESOURCES

Workforce

The per capita supply of active primary care physicians and physician assistants is somewhat higher in Hancock County compared with the rest of the state (Table 7). There are fewer physicians, psychiatrists, nurse practitioners, registered nurses, dental hygienists, psychologists, pharmacists, and social workers per capita than the state average.

HEALTH RESOURCES

Long-term services and supports

As shown in Table 8, Hancock County has four nursing facilities, with a combined 188 licensed beds, for a ratio of 18.1 beds per 1,000 people aged 65 and older. This is considerably lower than the state average of 31.2 beds. There are also 23 residential care facilities of various sizes, with a combined 311 beds, for a ratio of 1.3 beds per 1,000 residents, which is higher than the state average of 0.3 beds. Hancock County has two assisted living facilities with 70 total units. One nursing home and two residential care facilities offer Alzheimer’s care and support. Maps showing the location of long-term care facilities can be found in appendices E-H (pages 24-27).

Hospice care is provided by five organizations listed by 211Maine as operating in Hancock County; two of these are based in the county. There are four home health agencies located in Hancock County, as well as additional agencies based in other counties. There are four adult day programs in the county. Hancock County is one of four counties in the service area of the Eastern Area Agency on Aging, which serves as the local resource organization for seniors and caregivers.

HEALTH RESOURCES

Public health

Hancock County is part of the Downeast Public Health District, along with Washington County. The Downeast District has two Healthy Maine Partnerships, with one, Healthy Acadia, located in Hancock County.
HANCOCK COUNTY

ACCESS AND INSURANCE

Health care access

Hancock County has the third lowest percentage (76.9 percent) of women age 50 and over who report that they have had a mammogram in the past two years, behind Waldo and Washington counties. Compared to the state average, Hancock County residents are less likely to have had a checkup in the past year and are more likely to not have a personal doctor or health care provider (12.3 percent). A higher than average percentage of adults in the county have visited a dental provider in the past year (65.5 percent).

Source: Behavioral Risk Factor Surveillance System (BRFSS) (2012-2014). Data regarding visits to dental providers and mammography screening are collected every other year. The dental provider and mammography screening data provided above are from the 2012 and 2014 BRFSS surveys.

¹The relative difference column presents the variance between the percent values for the county and the state. The purpose of this column is to highlight where there are differences between the county and the state and does not signify statistical significance.
ACCESS AND INSURANCE

Insurance coverage

As indicated in Table 10, Hancock County has the highest percentage of individuals without insurance coverage (14.7 percent), and the second highest percentage of uninsured residents under the age of 18 (9.8 percent), behind Piscataquis County. Among those with health insurance, Hancock County residents are about as likely as residents in the state overall to have private and/or public insurance.

Source: American Community Survey (2009-2013). See Appendix I for additional information. People may have more than one source of insurance.

Public coverage includes the federal programs Medicare, Medicaid, and the Children’s Health Insurance Program (CHIP), individual state health plans, and other medical assistance programs.
HEALTH CARE ECONOMY

As indicated in Table 11, the health care sector is the third largest source of jobs in Hancock County, employing 12 percent of workers in the county, following tourism-based employment in retail trade (16 percent) and accommodations and food services (14 percent). Compared to other counties in the state, Hancock County has the second lowest share of total employment (tied with York County) employed in health care, the second smallest share of ambulatory health care services employment (tied with Oxford County), and the smallest share of nursing and residential care facilities employment (tied with Franklin and Piscataquis counties). Similarly, Hancock County has the third lowest concentration of health care workers in the state, the third lowest concentration of ambulatory health care services, and the second lowest concentration of nursing and residential care facilities in the state. Workers in the health care sector are spread across three hospitals and another 107 establishments that provide nursing and residential care and ambulatory health care services. The hospitals in Hancock County employ the largest number of workers in health care at 1,144 employees. Hospital-based employment is somewhat concentrated in the county, meaning that employment in hospitals makes up a larger share of overall employment in Hancock County relative to the nation. Contrarily, the number of workers in ambulatory health care services (751) is underrepresented in Hancock County.

Overall, the health care sector is a significant source of wages in Hancock County, accounting for 15 percent of total wages. On average, health care workers are paid annual wages of $46,809, which is 30 percent higher than the average wage across all industries in the county and is the third highest relative wage in the state. Average wages for hospital workers are significantly higher (60 percent) at $57,513, while ambulatory health care services workers are paid $46,674, about 30 percent higher than the county’s average wage. Nursing and residential care facilities pay average wages of $29,030; below the average wage for all workers in Hancock County.

Source: Department of Labor Quarterly Census of Employment and Earnings reported by County (2014). The figure for nursing homes and residential facilities varies from the figure in Table 8 due to a difference in definitions used by the Department of Labor and Maine’s Department of Licensing and Regulatory Services. Concentration helps indicate or explain whether an industry in a region makes up more or less of the economy compared to a benchmark place—in this case the U.S.

DATA SOURCES

The Maine Rural Health Profiles are based on 27 data sources. The data sources are described in detail below, with a summary of each source, the related metrics included in this workbook, notes, and limitations. The title of each data source is a clickable hyperlink which leads to the data source itself, or to a webpage with additional information.

211Maine.org (211)
What it is: 211Maine is a hotline established to help residents find answers to a wide range of issues including, but not limited to: Alzheimer’s resources, child care, consumer help, counseling, elder care, emergency shelter, health care, HIV/AIDS testing, home care, legal assistance, senior services, substance abuse, and transportation.

211Maine metrics in these profiles:
· Hospice providers

Note: This project uses 211Maine hospice provider data from 2014.

ALMS
What it is: ALMS is Maine’s search engine for Regulatory Licensing and Permitting, supporting the Health and Human Services, Public Safety, and Professional and Financial Registration departments.

ALMS metrics in these profiles:
· Residential care facilities

Note: This project uses ALMS data on residential care facilities from 2015.

Alzheimer’s Association
What it is: The Alzheimer’s Association is the leading voluntary health organization in Alzheimer’s care, support, and research. The Maine chapter of the Alzheimer’s Association provides resource directories for each county.

Alzheimer’s Association metrics in these profiles:
· Alzheimer’s facilities
· Adult day programs

Note: This project uses data from Alzheimer’s Association county-level resource directories updated between June 2015 and November 2015.

American Community Survey (ACS)
What it is: The ACS is an annual survey of approximately three million households in the United States. It is conducted by the U.S. Census Bureau, and it is the largest survey other than the decennial census that is administered by the Census Bureau. The data are weighted to be representative of Maine’s population, and a method developed by the University of Missouri yields county-level estimates. The survey includes a breadth of topics that are helpful in understanding the characteristics of communities.
ACS metrics used in these profiles:
· Total population
· Population under 20 years of age
· Population 20-64 years of age
· Population 65 years of age and older
· Population living with a disability
· Race
· Median household income
· Percentage of population at or below 150% FPL
· Percentage of population at or below 100% FPL
· Percentage under 18 years of age living below 100% FPL
· Percentage 65 years of age and older living below 100% FPL
· Educational attainment
· Civilian noninstitutionalized population insurance status
· Civilian noninstitutionalized population under 18 insurance status
· Commerically insured residents

Note: This project uses 2009-2013 ACS 5-year estimates collected between January 1, 2009 to December 31, 2013. 5-year estimates were used in lieu of less precise 1-year and 3-year estimates.

**American Hospital Association Annual Survey Database (AHA)**

What it is: The AHA Annual Survey Database is a comprehensive census of United States hospitals based on the AHA Annual Survey of Hospitals, conducted by the American Hospital Association since 1946. The data are reliable across time and can be used autonomously as a reference on hospitals; or in conjunction with other datasets by matching on the Medicare Provider Number or National Provider Identifier (NPI). The database is complemented with data from secondary sources including the U.S. Census Bureau and accrediting organizations.

AHA metrics in these profiles:
· Hospital service indicators
· Hospital bed count

Note: This project uses data from the 2012 and 2014 AHA Survey Databases.

**Area Health Resources File (AHRF)**

What it is: The AHRF draws from an extensive county-level database assembled annually from over 50 sources. AHRF products include county and state ASCII files, an MS Access database, an AHRF Mapping Tool, and a Health Resources Comparison Tool (HRCT). These products are made available at no cost by the Health Resources and Services Administration, Bureau of Health Workforce, National Center for Health Workforce Analysis to inform health resources planning, analysis, and decision making.

AHRF metrics in these profiles:
· Dental hygienists (National Center for Healthcare Analysis and Data 2009)
· Dentists, total professionally active (American Dental Association, 2013)
· Nurse practitioners (Centers for Medicare & Medicaid Services, 2014)
· Pharmacists (National Center for Healthcare Analysis and Data, 2009)
· Physician assistants (CMS NPI File, 2014)
* Physicians, total professionally active (American Medical Association, 2013)
* Practicing primary care physicians (American Medical Association, 2013)
* Psychiatrists (American Medical Association, 2013)
* Psychologists (National Center for Healthcare Analysis and Data, 2009)

Note: This project uses AHRF data from five different sources that date from 2009-2014. Data sources for each profession are provided above.

**Maine Behavioral Risk Factor Surveillance System (BRFSS)**

What it is: The BRFSS is an annual survey of Maine residents aged 18 and older funded by the Centers for Disease Control and Prevention (CDC). It is Maine's longest running and largest survey used to monitor population health statistics over time for a wide range of topics. The survey includes questions on lifestyle and behaviors related to health risk factors and leading causes of death and disease. Topics include smoking, weight and obesity, physical activity, and use of preventive health services. The data are weighted to be representative of Maine's population.

BRFSS Survey metrics in these profiles:
* Adults who have visited a dental provider in the past year
* Checkup in past year
* Did not get needed medical care due to cost in the past year
* No personal doctor or health care provider
* Women age 50 and older who have had a mammogram in the past two years

Note: Access information is culled from BRFSS data from 2012-2014. Data regarding visits to dental providers and mammography screening are collected every other year. Therefore, dental provider and mammography screening data provided in the profiles are from the 2012 and 2014 BRFSS surveys.

**Centers for Medicare and Medicaid Services (CMS), Provider of Services File**

What it is: The Provider of Services File contains data on characteristics of hospitals and other types of health care facilities, including the name and address of the facility and the type of Medicare services the facility provides, among other information. The data are collected through the Centers for Medicare & Medicaid Services (CMS) Regional Offices. The file contains an individual record for each Medicare-approved provider and is updated quarterly. The data is a resource to a variety of stakeholders, including researchers and application developers.

Provider of Services File metrics in these profiles:
* Federally Qualified Health Centers
* Nursing facilities data
* Hospital bed counts

Note: This project uses Provider of Services data updated in September 2015.

**County Health Rankings**

What it is: The annual *County Health Rankings & Roadmaps* program is a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. The Rankings measure health factors including high school graduation rates, obesity, smoking, unemployment, access to healthy foods, air and water quality, income, and teen births in nearly every county in America. The
Rankings provide a snapshot of how health is influenced by where we live, learn, work, and play.

Note: 2016 County Health Rankings metrics are used in the Health Status table (Table 2 in each county profile).

**Cutler Institute for Health and Social Policy**

What it is: The Cutler Institute for Health and Social Policy at the Muskie School of Public Service at the University of Southern Maine is dedicated to developing innovative, evidence-informed, and practical approaches to pressing health and social challenges faced by individuals, families, and communities.

Cutler Institute metrics in these profiles:
· School-based health centers

Note: State-funded school-based health center locations were provided by George Shaler, Senior Research Associate & Director of the Maine Statistical Analysis Center, in December 2015.

**Division of Licensure and Regulatory Services (DLRS)**

What it is: The mission of the Division of Licensing and Regulatory Services is to support access to quality and effective health care and social services for Maine citizens by developing and applying regulatory standards that help people have safe and appropriate outcomes. The DLRS is responsible for licensing medical and long-term care facilities, assisted living facilities, residential care facilities, private non-medical institutions, mental health service providers, substance abuse agencies, and programs and services to children. DLRS maintains an online database of the state's health care providers.

DLRS metrics in these profiles:
· Hospital bed count
· Nursing facilities
· Home health
· End-Stage Renal Disease facilities
· Ambulatory surgery centers
· Hospice providers

Note: This project uses DLRS data from 2014-2015.

**Maine Department of Labor, Center for Workforce Research and Information, Unemployment and Labor Force (DOL)**

What it is: Data is derived from the Local Area Unemployment Statistics (LAUS) program. LAUS is a federal-state cooperative program that develops monthly estimates of the labor force, employment, unemployment, and unemployment rates for the state, counties, labor market areas, metropolitan and micropolitan statistical areas, cities, and towns.

DOL metrics in these profiles:
· Unemployment rate

Note: This project uses average annual unemployment rates for 2015.
Maine Emergency Medical Services (EMS) Run Reporting System

What it is: Maine EMS is a bureau within the Department of Public Safety. The Maine EMS system includes the Board of EMS, the Maine EMS staff, six regional EMS offices, and the Medical Direction and Practice Board.

Maine EMS metrics in these profiles:
· EMS companies

Note: The EMS data used for this project was included in the Maine EMS Run Reporting System 2014 Annual Report.

Maine Health Management Coalition (MHMC)

What it is: The Maine Health Management Coalition (MHMC) is a nonprofit organization whose over 70 members include public and private purchasers, hospitals, health plans, and doctors working together to measure and report health care value. MHMC helps employers and their employees use this information to make informed decisions.

MHMC metrics in these profiles:
· Primary care practices

Note: The MHMC primary care practices data included in this project was updated on November 30, 2015.

Maine Oral Health Program

What it is: The Maine Oral Health Program is part of the Division of Population Health at the Maine CDC, a Division of the Maine Department of Health and Human Services.

Maine Oral Health Program metrics in these profiles:
· Safety net dental clinics

Note: The safety net dental clinic information included in this project is from the Oral Health Program's "Dental Clinics and Services for Maine Residents" directory updated in July 2015.

Maine Quality Counts

What it is: Maine Quality Counts is an independent, multi-stakeholder, regional health care collaborative dedicated to transforming health and health care in Maine. The organization seeks to improve health care by leading, collaborating, and aligning improvement efforts. Maine Quality Count's 75+ members are major care delivery organizations, payers and employers, as well as individuals, providers, and associations. The Dirigo Health Agency's Maine Quality Forum, Maine Quality Counts, and the Maine Health Management Coalition work together to lead the Maine Patient Centered Medical Home (PCMH) Pilot.

Maine Quality Counts metrics in these profiles:
· Patient Centered Medical Homes
· Health Homes
· Community Care Teams
Note: Maine Quality Counts provided the project team with PCMH, Health Home, and CCT locations dated January 13, 2016.

**Occupational Employment Statistics Survey (OES)**

What it is: The Maine Department of Labor, Center for Workforce Research and Information prepares the Occupational Employment and Wage Estimates for Maine using the OES. Data is derived from the Quarterly Census of Employment and Wages (QCEW) program. QCEW is a federal-state cooperative program that collects employment and wage information for workers covered by state unemployment insurance laws and for Federal workers covered by the Unemployment Compensation for Federal Employees program. Data includes wage, employment, address, and coding information for individual establishments.

OES metrics in these profiles:
- Registered nurses
- Social workers

Note: This project uses OES data from 2014. OES has withheld the number of registered nurses and/or social workers for several Maine counties. OES withholds employment estimates for several reasons, including the need to protect the confidentiality of survey respondents, or failure to meet data quality standards. In order to ensure confidentiality, OES does not provide the reason that a particular estimate was not released.

**Office of MaineCare Services, Participating Behavioral Health Home Organization Provider Information (OMS)**

What it is: The Office of MaineCare Services oversees MaineCare—Maine’s Medicaid program. OMS keeps and updates a list of Behavioral Health Homes serving adults and a list of Behavioral Health Homes serving children.

Office of MaineCare Services metrics in these profiles:
- Behavioral Health Home organizations

Note: The list of Behavioral Health Homes serving adults and children that was used for this project was updated in November 2015.

**Maine Demographic Projections, Office of Policy and Management (OPM)**

What it is: The Office of Policy and Management has released population projections for Maine and its counties and towns for 5-year intervals to 2032, based on 2012 U.S. Census Bureau population estimates. The projections are broken down by county, age, and sex.

Maine Demographic Projections metrics in these profiles:
- Total projected population
- Projected 65 and older
- Projected 85 and older
Department of Labor Quarterly Census of Employment and Wages (QCEW)

What it is: This data series includes all employment covered under unemployment insurance and excludes non-employed workers, railroad workers, and some government employees. Data for employment, establishments, and wages are reported using the North American Industrial Identification System (NAICS) which arranges industries into hierarchical groupings. This analysis includes the highlighted industries at the “three-digit NAICS level.”

QCEW metrics in these profiles:
- All health care economy data

Note: Nondisclosure rules do not allow for sufficient analysis at more detailed industry levels. However, it is assumed that employment in various industries is included in the higher level industries we report on: ambulatory health care services, hospitals, and nursing and residential care facilities. This project uses annual averages from 2014.

Behavioral Health Treatment Services Locator (SAMHSA)

What it is: The Behavioral Health Treatment Services Locator is an online source of information for persons seeking treatment facilities in the U.S. or U.S. Territories for substance use disorders and/or mental health problems. The Locator is a product of SAMHSA’s Center for Behavioral Health Statistics and Quality (CBHSQ) and is compiled from responses to CBHSQ’s annual surveys of treatment facilities (the National Survey of Substance Abuse Treatment Services and the National Mental Health Services Survey). All information is updated annually based on facilities’ responses to the annual substance abuse and mental health facility surveys.

SAMHSA metrics in these profiles:
- Mental health treatment facilities
- Substance abuse treatment facilities

Note: See link above and then click “About” for a description of facilities that are and are not eligible for inclusion in the Locator. SAMSHA updates the services locator data on a rolling basis. The data included in this project were accessed on November 18, 2015.

Buprenorphine Treatment Physician Locator (SAMHSA)

What it is: The SAMHSA Buprenorphine Treatment Physician Locator allows users to find physicians authorized to treat opioid dependency with buprenorphine by state.

SAMHSA Buprenorphine Treatment Physician Locator metrics in these profiles:
- Physicians authorized to prescribe buprenorphine

Note: SAMSHA updates the treatment physician locator data on a rolling basis. The data included in this project were accessed January 7, 2016.
Opioid Treatment Program Directory (SAMHSA)

What it is: The SAMHSA Opioid Treatment Program Directory allows users to search for programs providing methadone for the treatment of opioid addiction in each state and territory of the U.S.

SAMHSA Opioid Treatment Program Directory metrics in these profiles:
- Methadone treatment programs

Note: SAMSHA updates the program directory data on a rolling basis. The data included in this project were accessed November 10, 2015.

Maine Shared Health Needs Assessment & Planning Process (SHNAPP)

What it is: The Maine Shared Health Needs Assessment & Planning Process (SHNAPP) Project—a collaborative of the Central Maine Medical Family, Eastern Maine Healthcare Systems, MaineGeneral Health, MaineHealth and the Maine CDC—works to improve the health status of Maine residents and track results. The SHNAPP reports provide an in-depth look at population health status, risk factors, barriers to care, demographics, and social factors affecting Maine communities. They also include qualitative responses from a broad sample of stakeholders representing every county in Maine. Together, this data provides unique perspectives on the collective health of Maine people.

Note: 2015 SHNAPP metrics are used in the “Health Status Indicators Relative to State Average” table included in each county profile.

U.S. Census

What it is: The U.S. Census Bureau counts every resident in the United States. It is mandated by Article I, Section 2 of the Constitution and takes place every 10 years.

U.S. Census metrics in these profiles:
- Percentage of people living in rural areas
- Persons per square mile

Note: This workbook includes Census data from 2010. Persons per square mile was calculated using ACS 2011-2013 population data and 2010 Census land area data.

U.S. Department of Agriculture, Economic Research Service, Rural-Urban Continuum Codes

What it is: The U.S. Department of Agriculture's Rural-Urban Continuum Codes (RUCCs) are a classification system that distinguishes metropolitan counties by the population size of their metro area, and nonmetropolitan counties by degree of urbanization and adjacency to a metro area.

Note: RUCCs are referenced in the narrative description of a county's rurality in the “Geography and Demographics” section of each profile. All RUCCs are from 2013.
VA Maine Healthcare System

What it is: The VA Maine Healthcare system serves Maine veterans through the delivery of “timely quality care by staff who demonstrate outstanding customer service, the advancement of health care through research, and the education of tomorrow’s health care providers.” The VA Maine Healthcare System website includes the locations of all VA Maine Healthcare facilities, including Togus VA Medical Center, Community-Based Outpatient Clinics, and Vet Centers.

VA Maine Healthcare System metrics in these profiles:
· VA Hospital
· VA Facilities (other than hospital)

Note: Locations of VA Maine Healthcare facilities were accessed from the VA Maine Healthcare System website in November 2015.
GLOSSARY

**ambulatory surgery center**: licensed centers that perform surgeries that generally do not exceed 90 minutes in length and do not require more than four hours recovery or convalescent time.

**Area Agency on Aging**: a nonprofit organization, funded through the federal Older Americans Act, which is dedicated to planning and implementing social services for adults age 60 and older.

**assisted living facility**: Maine defines an assisted living facility as providing a comprehensive array of support services to consumers in private apartments in buildings that include a common dining area. These programs may include meal delivery, housekeeping and chore assistance, and case management. These programs also provide medication administration directly or indirectly.

**behavioral health home**: a behavioral health agency that serves as a health home (see below) for people with mental health and substance use disorders.

**buprenorphine**: buprenorphine is used in medication-assisted treatment to help people reduce or quit their use of heroin or other opiates, such as pain relievers like morphine. Unlike methadone treatment, which must be administered in a highly structured clinic, buprenorphine is the first medication to treat opioid dependency that is permitted to be prescribed or dispensed in physician offices, significantly increasing treatment access.

**community care team (CCT)**: CCTs are multi-disciplinary, community-based, practice-integrated care management teams that work closely with the patient-centered medical home practices (see below) to provide enhanced services for the most complex, most high-needs patients in the practice.

**County Health Rankings**: a project of the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute that utilizes national data to rank the health of each county relative to others in each state, using a model of population health that emphasizes the many factors that, if improved, can help make communities healthier places to live, learn, work, and play.

**Critical Access Hospital (CAH)**: an acute care hospital certified under a specific set of Medicare Conditions of Participation. CAHs may have no more than 25 inpatient beds and must maintain an annual average length of stay of no more than 96 hours for acute inpatient care; offer full time, round-the-clock emergency care services; and be located in a rural area at least a 35 mile drive (or closer in some circumstances) from any other hospital or CAH. The designation provides a sustainable model of acute care services to meet the needs of vulnerable rural communities.

**end-stage renal disease (ESRD) facility**: includes renal transplantation centers, renal dialysis centers, and renal dialysis facilities.

**federal poverty level (FPL)**: a measure of income issued every year by the Department of Health and Human Services; federal poverty levels are used to determine eligibility for certain programs and benefits, including subsidies for Marketplace health plans, and Medicaid and CHIP coverage.
**federally qualified health center (FQHC):** federally designated and funded clinics that serve an underserved area or population, offer a sliding fee scale, provide comprehensive services, have an ongoing quality assurance program, and have a governing board of directors. Certain tribal organizations and FQHC look-alikes (an organization that meets PHS Section 330 eligibility requirements, but does not receive grant funding) may also receive special Medicare and Medicaid reimbursement.

**frontier:** the most remote and sparsely populated places along the rural-urban continuum, with residents far from health care services, schools, grocery stores, and other necessities. Frontier is often thought of in terms of population density and distance in minutes and miles to population centers and other resources, such as hospitals. Frontier areas may be defined at the community level by county, ZIP code or census tract; however, they are most often delineated by county.

**health home:** offers coordinated care to individuals with multiple chronic health conditions, including mental health and substance use disorders. The health home is a team-based clinical approach that includes the consumer, their providers, and family members, when appropriate. The health home builds linkages to community supports and resources, and enhances coordination and integration of primary and behavioral health care to better meet the needs of people with multiple chronic illnesses.

**Healthy Maine Partnership (HMP):** HMPs are funded by tobacco settlement dollars and implement initiatives and policies at both the state and local level that reduce chronic disease risk, reduce or eliminate involuntary exposure to secondhand smoke, prevent tobacco use, increase access to healthy foods, and increase opportunities to be physically active.

**home health care agency:** provides health care services to patients under the care of a physician in the patient's place of residence. This differs from a personal care agency, which hires/employs unlicensed assistive personnel to provide assistance with activities of daily living to individuals in the places in which they reside, either permanently or temporarily.

**Maine Shared Health Needs Assessment & Planning Process (SHNAPP) Project:** The SHNAPP Project has compiled population health assessment data to support a collaborative, statewide community health needs assessment process led by the Maine Center for Disease Control and Prevention and the state's four largest health systems.

**mental health treatment facility:** facilities that provide mental health treatment services and are funded by the state mental health agency or other state agency or department; mental health treatment facilities administered by the U.S. Department of Veterans Affairs; and private for-profit and nonprofit facilities that are licensed by a state agency to provide mental health treatment services, or that are accredited by a national treatment accreditation organization (e.g., The Joint Commission, National Committee for Quality Assurance, etc.).

**nursing facility (also skilled nursing facility):** facility primarily engaged in providing skilled nursing care and related services for residents who require medical or nursing care, rehabilitation services or health-related care and services above the level of room and board.
patient-centered medical home: a model or philosophy of primary care that is patient-centered, comprehensive, team-based, coordinated, accessible, and focused on quality and safety.

population density: a measurement of the number of people per unit of geographic area (e.g., square mile).

public health district: eight geographic districts within Maine designed to improve coordinated delivery of essential public health services.

residential care facility: provides housing and assistance with services, including activities of daily living and instrumental activities of daily living.

Rural Health Clinic (RHC): a federally designated health clinic certified to receive special Medicare and Medicaid reimbursement. They are only required to provide outpatient primary care services and basic laboratory services. RHCs must be located within rural areas that have health care shortage designations.

safety net dental clinic: clinics that strive to provide oral health care to individuals and their families regardless of their ability to pay.

school-based health center (SBHC): primary care clinics based in primary and secondary school campuses. Most SBHCs provide a combination of primary care, mental health care, substance abuse counseling, case management, dental health, nutrition education, health education, and health promotion.

substance abuse treatment facility: a facility with licensure/accreditation/approval to provide substance abuse treatment from a state substance abuse agency or a national treatment accreditation organization (e.g., The Joint Commission, Commission on Accreditation of Rehabilitation Facilities, National Committee for Quality Assurance, etc.); staff who hold specialized credentials to provide substance abuse treatment services; and authorization to bill third-party payers for substance abuse treatment services using an alcohol or drug clinical diagnosis.

unorganized territory (UT): UTs have no local, incorporated municipal government. In Maine there are over 400 unorganized townships, plus many coastal islands that do not lie within municipal boundaries. The land area of UTs is slightly over one half the area of the entire state. Approximately 9,000 year-round residents live in UTs, plus additional seasonal residents. The Maine Legislature serves as the “local governing body” for UTs, as it annually reviews and approves the various budgets from state agencies and county government necessary to provide services and property tax administration in UTs.
